

Certificate of Sanitization

Whole-drive erasure, recorded under NIST SP 800-88 Rev. 2

No read-back verification recorded

Level asked for: not recorded. Level achieved: not recorded. Do not rely on this medium as sanitized.

Media		What was done	
Model	not recorded	Category	ADDRESSABLE
Serial number	not recorded		WHOLE-DRIVE CLEAR
Capacity	0 bytes	Command	not recorded
Interface	unknown	Protocol	block
Persistent path	not recorded	Scope	LBA 0 to the last LBA the operating system exposed. An HPA/DCO region is outside this range unless it was restored through the HPA/DCO workflow first.
Sanitization		Verification	not verified (no read-back recorded)
Level asked for	not recorded	Assurance	NIST SP 800-88 Rev. 2 Clear of the addressable storage: every LBA the operating system exposed was overwritten and read back. Not a Purge. Not NAND-level destruction: flash remapped and spare blocks are not addressable and were not written.
Level achieved	not recorded		
Method	not recorded		
Why this method	not recorded		
Hidden areas	none measured		
Verification			
Strategy	not recorded		
Result	not passed		
Bytes read back	0		
Detection confidence	0.00%		
Residual risk	not recorded		
		Accountability

by_id_path: none recorded
size_bytes: 0
transport: unknown
logical_block_size: 0
physical_block_size: 0

3. Method

method: none recorded
level_requested: none recorded
level_achieved: none recorded
justification: none recorded
capability_evidence: {}
semantics:
 category: ADDRESSABLE WHOLE-DRIVE CLEAR
 method: not recorded
 protocol: block
 transport: not recorded
 scope: LBA 0 to the last LBA the operating system exposed. An HPA/DCO region is outside this range unless it was restored through the HPA/DCO workflow first.
 verification: not verified (no read-back recorded)
 assurance: NIST SP 800-88 Rev. 2 Clear of the addressable storage: every LBA the operating system exposed was overwritten and read back. Not a Purge. Not NAND-level destruction: flash remapped and spare blocks are not addressable and were not written.
limitations:
 - OPERATOR IDENTITY IS A LOCAL ACCOUNT, NOT A PERSON: the actor recorded in the ledger is the operating-system account that ran the operation, resolved by the privileged helper from the uid it was started with and never from anything the client sent. It establishes which account acted. It does not establish which human was at the keyboard, and this tool makes no claim that it does. Any operator label shown alongside it is text an examiner typed and is recorded as a label, not as an identity.
 - WRITE_BLOCK_NOT_VERIFIED: BLKROSET was set and BLKROGET read it back as applied, which establishes that the kernel holds this device read-only. It does not establish that a write would be refused - proving that requires attempting one, and this tool never writes to an evidence device. Qualify the interface once against scratch media with `scripts/probe-write-block.py` and keep the result. Note also that BLKROSET governs the block layer only: SG_IO and ATA pass-through writes bypass it entirely, as does a partition node whose own flag was never set.

standards:

method_vocabulary: clear, purge and destroy, as defined in NIST SP 800-88r2 (September 2025), Sec. 3.1. NIST SP 800-88r1 was withdrawn on 2025-09-26.

technique_standard: NIST SP 800-88r2 Sec. 4.4 says sanitization should be performed in a manner that complies with IEEE 2883 or a standard identified as acceptable by organizational policy. This tool's techniques have not been verified against the text of IEEE 2883-2022, and this report does not claim conformance to it.

verification_and_validation: The verification section records this tool's read-back of the medium. NIST SP 800-88r2 Sec. 4.5.2 validation - the decision to accept the outcome or to repeat or escalate sanitization - belongs to the organization and is not made by this tool.

nist_sp_800_88r2_sec_4_6_fields_not_recorded:

- manufacturer, as a field separate from the model string
- organizationally assigned media or property number
- media source
- pre-sanitization confidentiality categorization (optional)
- name, position or title, location, contact information and signature of each individual performing verification and validation

regulatory_references:

instrument: Digital Personal Data Protection Act, 2023, section 8(7)

in_force: Not at the date of this build: G.S.R. 843(E) of 13 November 2025 brings sections 3 to 17 of the Act into force eighteen months after its publication.

this_record_evidences: that the device or paths named in this report were overwritten or sanitized by the method named, and the verification result this tool recorded for them

requires_a_person:

- deciding that the specified purpose is no longer served or that consent was withdrawn
- confirming that no law in force requires the data to be retained
- finding every other copy, including backups and data made available to a Data Processor, which section 8(7)(b) also requires to be erased
- informing the Data Principal where rule 8(2) of the Digital Personal Data Protection Rules, 2025 applies
- retaining the processing logs rule 8(3) requires for at least one year, which an erasure must not destroy
